

KM-700

Katsuhiro Miura has spent 5 years perfecting the newest member of the Miura Golf lineup, the KM-700. Designed to deliver the club head to square at impact, this revolutionary design is made possible only by Miura's proprietary manufacturing techniques in concert with the grinding expertise of the Miura Craftsmen. The never ending search for perfection included numerous iterations of the head, all the while searching for the optimum weight distribution. The result is a club which will allow all golfers to get the most out of their game.

OPTIMIZED PERFORMANCE

The unique shape and weight distribution on the back of the head optimizes the center of gravity position for each iron. This revolutionary club head design also promotes a return to square at impact, benefitting all golfers.

MORE FORGIVENESS

This club head also features a revolutionary hosel and heel design which allows for moving the center of gravity 3mm closer to the toe, 35mm from the heel. (7 iron) The bigger "sweet spot" promotes a playability which is similar to what one might see in a wood. Off center hits are straighter and farther. *(similar to the TC 201 – 34mm).

REVOLUTIONARY SOLE DESIGN

A key component to the playability of this iron is in the toe-cut grind visible on the sole. Optimized camber and precise bounce promotes the best ball on face contact, regardless of the lie or turf conditions.

MATERIAL

Soft iron(S20C)

DEXTERITY

Right-Handed

FINISH

W Nickel Chrome • Deep Satin Finish
